

# Announcing SOC 2 Compliance: Ensuring the Highest Standards of Security

**Enactia is committed to ensure and protect the privacy of its clients and their data.**

At Enactia, being a Cloud Software suite for Privacy and Cybersecurity Compliance, we are very proud to announce that PricewaterhouseCoopers Limited (Cyprus) has expressed a conclusion on our Cloud software suite in accordance with the International Standard on Assurance Engagements (ISAE) 3000 and AICPA SOC2. The conclusion expresses PricewaterhouseCoopers Limited's opinion on the outcome of the evaluation of design effectiveness over internal controls of our Cloud software suite against the SOC 2 standard for Security, Availability and Confidentiality trust service criteria.

Developed by the International Auditing and Assurance Standards Board, ISAE 3000 is one of the most widely recognized standards used by accounting firms to independently assess a company's report regarding its internal control environment.

SOC 2 is developed by the American Institute of CPAs and defines Trust Service Criteria for the service organization's Security, Availability, Processing integrity, Confidentiality and Privacy controls.

As companies increasingly use outside vendors to perform activities that are core to their business operations and strategy, there is a need for more trust and transparency into cloud service providers' operations, processes, and results.

This independent opinion of security controls is crucial for our customers spanning in numerous services and jurisdictions, especially in highly regulated industries.

Simplifying your Data Protection and  
Cybersecurity Governance & Compliance
